

Spring Constellations in North America

Coloring and Activity Sheets

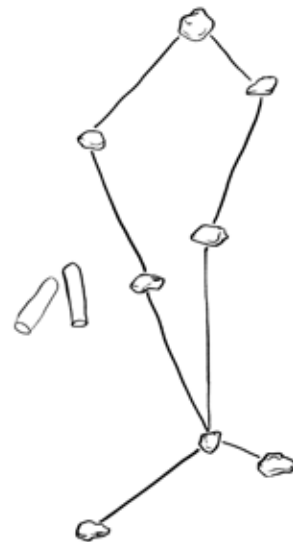

From late March through early June look into the night sky (in North America) and you'll see the spring constellations including **Ursa Major**, **Boötes**, **Draco**, **Leo**, **Cancer**, and if you look really hard, **Lynx**.

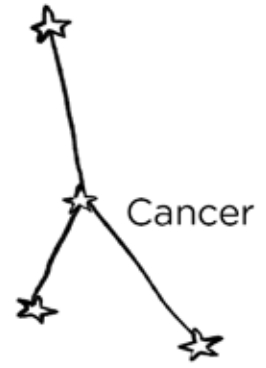

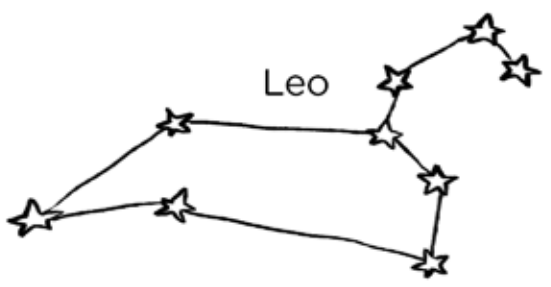

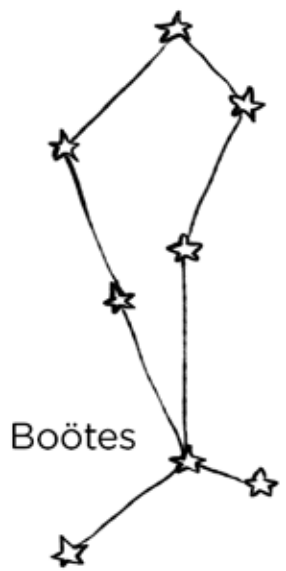

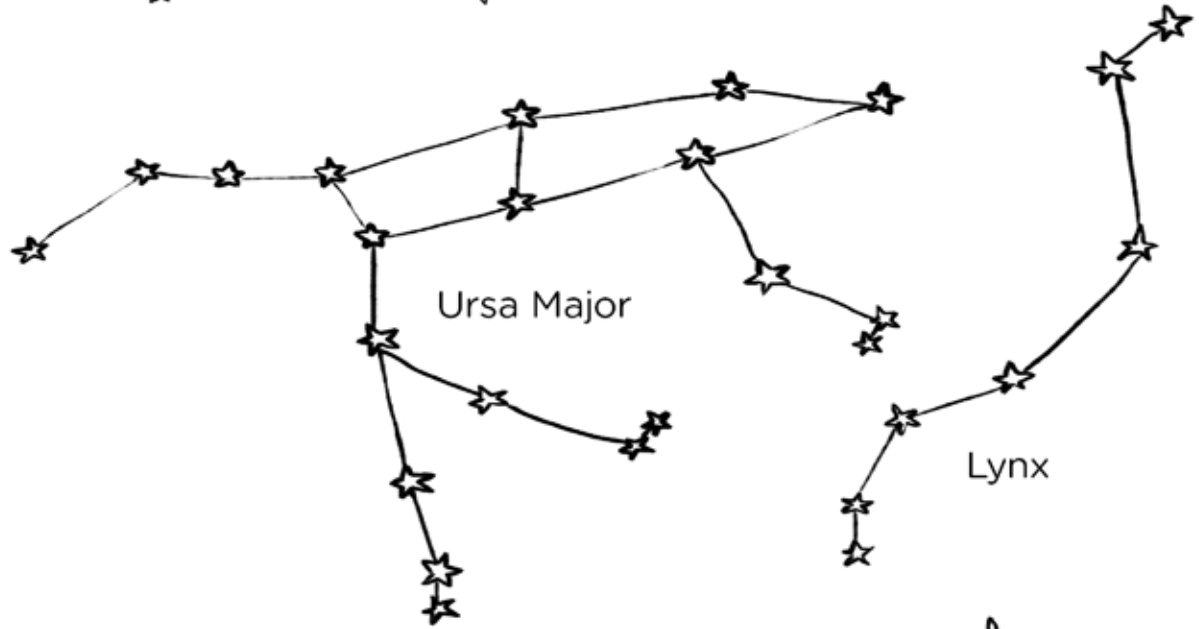

We've created these fun coloring sheets showing each constellation and its relative placement in the night sky as well as an individual study on each, with an outline of their form.

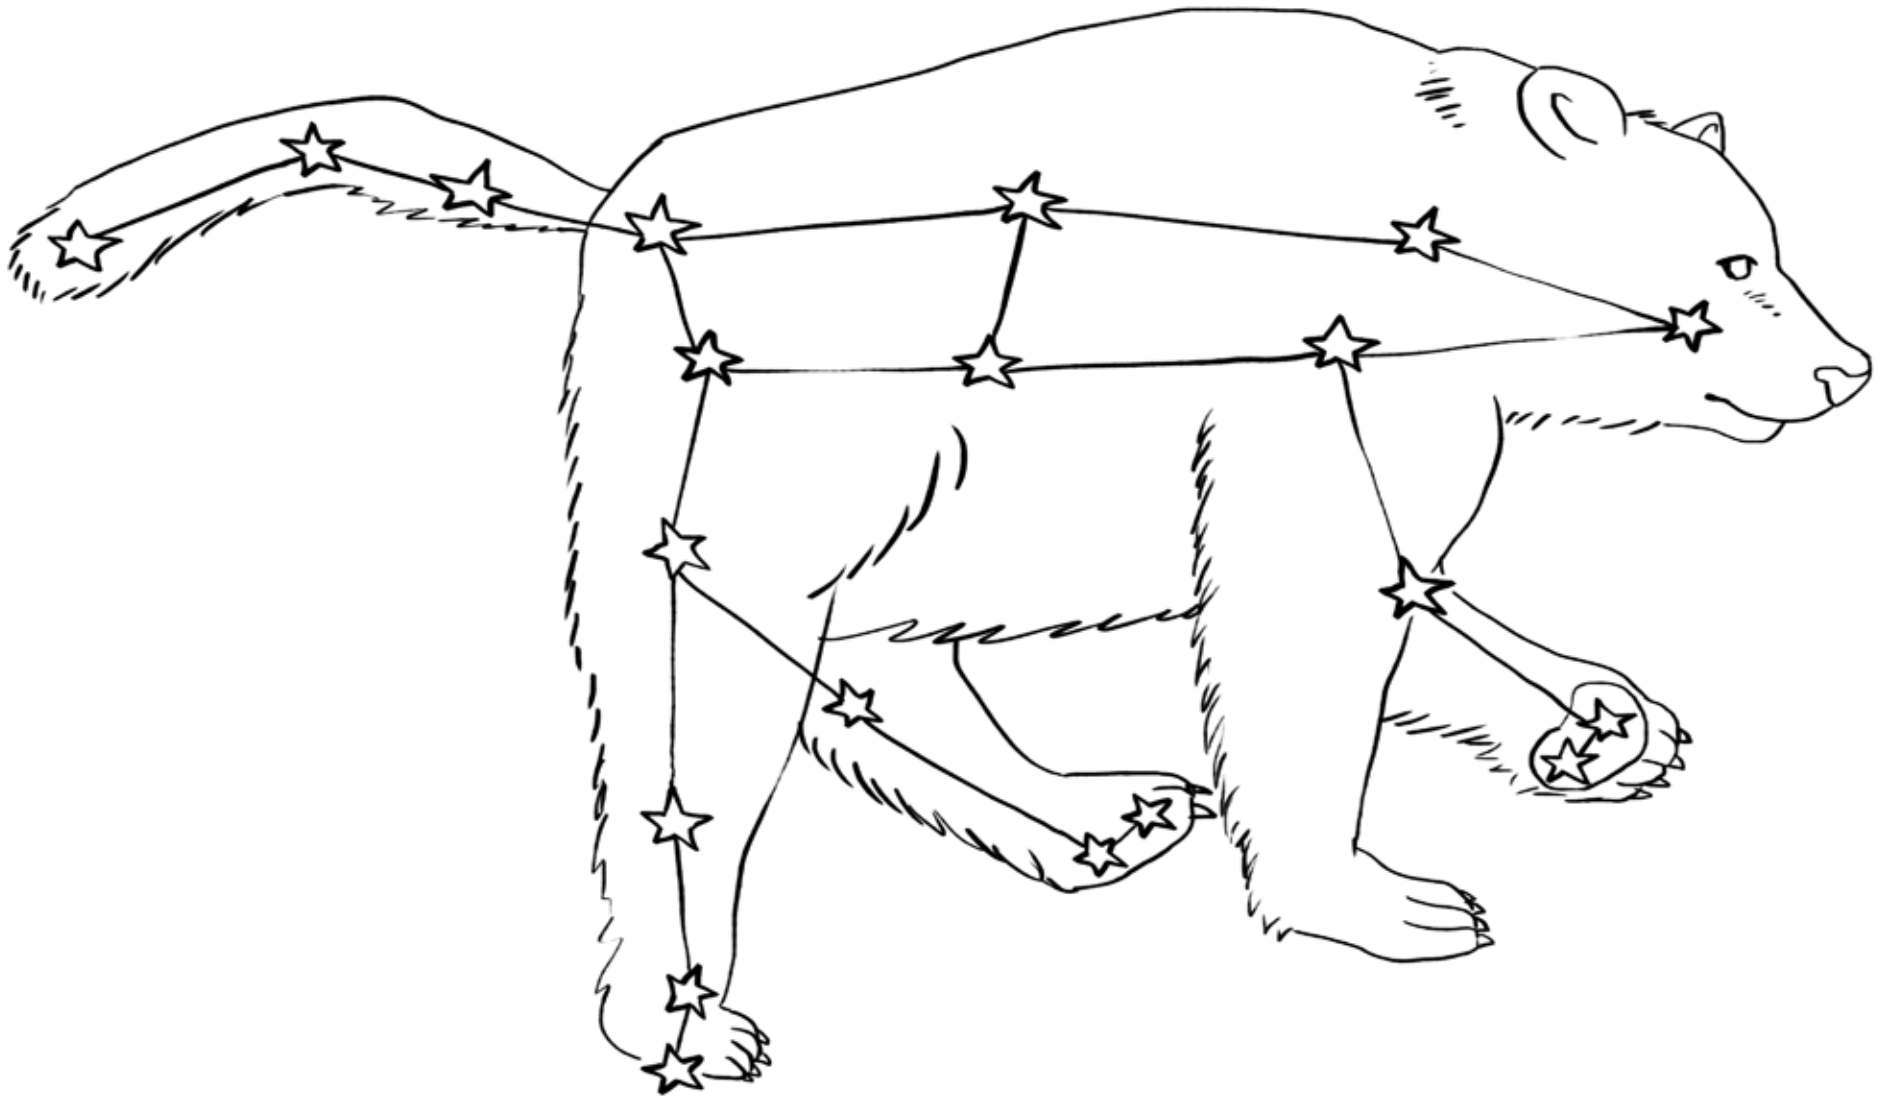

After you've colored the sheets, take them outside and recreate the constellations using rocks for the major stars and connect the "star" rocks with sidewalk chalk.

Finally, take a peek at the night sky and see how many you can find. Then why not make up some of your own?

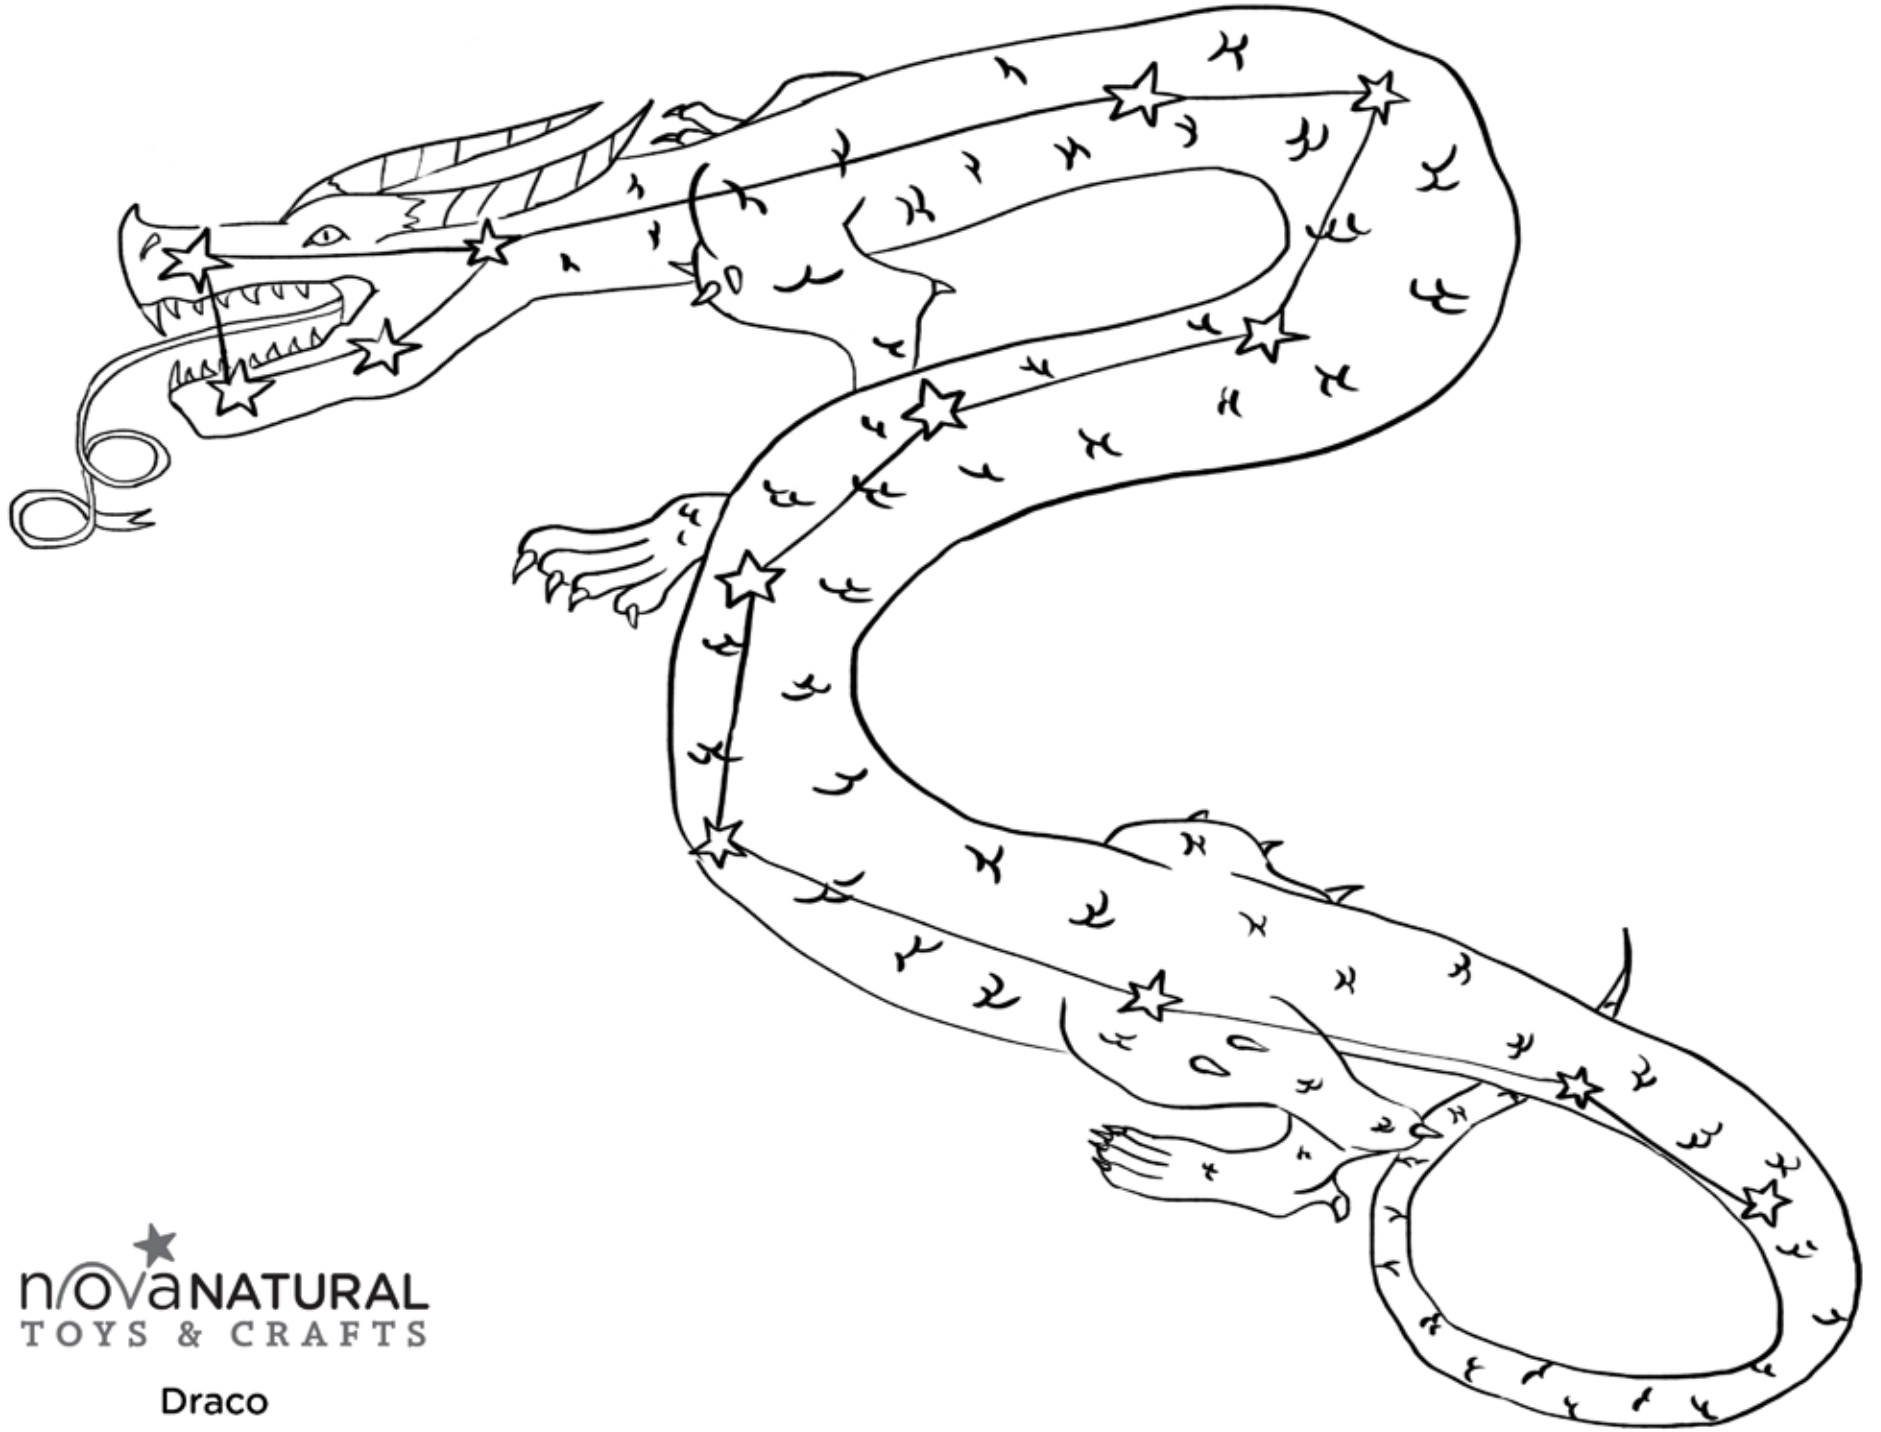

Ursa Major
